

OGNES - Modern Ligature Serif Font

Hey everyone, I am happy to give you OGNES, a brand new ligature serif font inspired by unbeatable elegance and beauty of France! I am really proud to offer you my new chic font that comes with over 100 ligatures and alternate letters. Each of the standard letters, ligatures, and alternates was handcrafted and made to fit other letters without exception. All letters are 100% unique with soft rounded edges that will give you a different look than any other serif font.

I invite you to check out all the preview images to see what can be done with this amazing ligature font. Whether you have a client that needs a new chic logo, or you're designing your social media posts. Maybe you're preparing your wedding mood board, stationery, invitations, OGNES Ligature font is just perfect for all of that and much much more. Check out the photos I have prepared for you to see what you can do with it and happy creating!

Using ligatures & alternates:

HOW TO USE INFO:

1. Installing fonts

Before you can use OGNES ligature serif font you have to install it. If you're on Windows follow these steps:

Windows 7/8, Windows Vista, Windows XP (Home and Professional), and Windows 2000 have built-in support for OpenType fonts (both .otf and .ttf), as well as PostScript Type 1 fonts (.pfb + .pfm) and TrueType (.ttf). You can use the Windows Fonts control panel to install or remove fonts of all these formats, though the control panel is accessed slightly differently between Windows XP and Windows 2000. See the instructions below.

To install your fonts using a font management utility (e.g., Extensis Suitcase, Font Reserve, or Font Navigator), refer to that utility's documentation for instructions on adding and activating the fonts.

If you're using OSX, than check the instructions below:

Mac OS X has native support for Type 1 and OpenType fonts, which can be installed just like other font type on OS X. However, fonts installed in OS X system locations are not available to "Classic" applications (see section below). Fonts installed in the OS X native environment can be accessed by (a) any user or (b) just by an individual user.

To install your fonts using a font management utility (e.g., Extensis Suitcase, Font Reserve, FontAgent Pro or MasterJuggler), refer to that utility's documentation for instructions on adding and activating the fonts.

- Before installing your fonts, quit all active applications.
- Locate the folder that contains the fonts you want to install. If you have purchased Adobe OpenType fonts online, they will have been decompressed to a folder on your hard drive. If you have purchased multiple font packages, each will have its own folder.
- Copy or move all the font files from their individual font folders into either of the following locations. (Note that the fonts must be loose in the destination folder, not in a subfolder.)
- (a) <Volume>/Library/Fonts/ Note: you must be logged on as an "Administrator" to place fonts in this location. Fonts in this location can be used by any user.
- (b) <Volume>/Users/<username>/Library/Fonts/ Note: fonts in this location can be used only by the specified user.
- The fonts are now installed and will appear in the font menus of your applications.
